**Feng Xu\***, Dept. of Math, U.C.Riverside, Riverside, CA 92521. *On a subfactor generalization of Wall's conjecture.*

In this talk we discuss a conjecture on intermediate subfactors which is a generalization of Wall's conjecture from the theory of finite groups. We explore special cases of this conjecture and present supporting evidence. This talk is based on joint work with Robert Guralnick. (Received August 11, 2010)
