**Andrew B Perry\*** (aperry@springfieldcollege.edu). *Cajori's three great arithmeticians: Pike, Daboll, and Adams.*

In his 1890 book *The Teaching and History of the mathematics in the United States*, historian Florian Cajori identified "three great arithmeticians" of the early nineteenth century, each of them with wildly popular textbooks. Nicholas Pike wrote *A New and Complete System of Arithmetic (Composed for the Citizens of the United States)*; Nathan Daboll wrote *Schoolmaster's Assistant*; and Daniel Adams wrote *Scholar's Arithmetic*. We will compare and contrast the content of these three books which collectively dominated the arithmetic textbook market in the early days of the United States of America.
