Joseph Feneuil\* (joseph.feneuil@temple.edu). The Dirichlet problem for sets with higher co-dimensional boundaries.

Let  $\Gamma \subset \mathbb{R}^n$  be a set of dimension d < n-1 and  $\Omega = \mathbb{R}^n \setminus \Gamma$  be its complement. We develop an elliptic theory adapted to  $\Omega$ , where we introduce a new notion of harmonic measure on  $\Gamma$ . When  $\Gamma$  is a special Lipschitz set with small Lipschitz constant, we solve the Dirichlet problem  $(D_p)$  for any  $p \in (1, +\infty)$ . In particular, we prove that the harmonic measure on  $\Gamma$  is  $A_{\infty}$ -absolutely continuous with respect to the d-dimensional Hausdorff measure. This is a joint work with Guy David, Svitlana Mayboroda and Zihui Zhao. (Received September 04, 2018)
