Josiah Willard Gibbs Lecture

Wednesday, January 6, 2016

8:30–9:30 PM

Ballroom 6BC

Sixth Floor

Washington State Convention Center

Seattle, Washington

Graphs, Vectors, and Matrices

Daniel A. Spielman

Yale University

To commemorate the name of Professor Gibbs, the American Mathematical Society established an honorary lectureship in 1923 to be known as the Josiah Willard Gibbs Lectureship. The lectures are of a semipopular nature and are given by invitation. They are usually devoted to mathematics or its applications. It is hoped that these lectures will enable the public and the academic community to become aware of the contribution that mathematics is making to present-day thinking and to modern civilization.

Abstract

I will explain how we use linear algebra to understand graphs and how recently developed ideas in graph theory have inspired progress in linear algebra.

Graphs can take many forms, from social networks to road networks, and from protein interaction networks to scientific meshes. One of the most effective ways to understand the large-scale structure of a graph is to study algebraic properties of matrices we associate with it. I will give examples of what we can learn from the Laplacian matrix of a graph.

We will use the graph Laplacian to define a notion of what it means for one graph to approximate another, and we will see that every graph can be well-approximated by a graph having few edges. For example, the best sparse approximations of complete graphs are provided by the famous Ramanujan graphs. As the Laplacian matrix of a graph is a sum of outer products of vectors, one for each edge, the problem of sparsifying a general graph can be recast as a problem of approximating a collection of vectors by a small subset of those vectors. The resulting problem appears similar to the problem of Kadison and Singer in Operator Theory. We will sketch how research on the sparsification of graphs led to its solution.

Daniel A. Spielman

Daniel Alan Spielman received his B.A. in Mathematics and Computer Science from Yale in 1992, and his Ph.D. in Applied Mathematics from M.I.T. in 1995. He spent a year as an NSF Mathematical Sciences Postdoc in the Computer Science Department at U.C. Berkeley, and then taught in the Applied Mathematics Department at M.I.T. until 2005. Since 2006, he has been a Professor at Yale University. He is presently the Henry Ford II Professor of Computer Science, Mathematics, and Applied Mathematics.

He has received many awards, including the 1995 ACM Doctoral Dissertation Award, the 2002 IEEE Information Theory Paper Award, the 2008 Godel Prize, the 2009 Fulkerson Prize, the 2010 Nevanlinna Prize, the 2014 Pólya Prize, an inaugural Simons Investigator Award, and a MacArthur Fellowship. He is a Fellow of the Association for Computing Machinery and a member of the Connecticut Academy of Science and Engineering. His main research interests include the design and analysis of algorithms, network science, machine learning, digital communications, and scientific computing.

Gibbs Lectures

1. February 1924, New York, New York; Professor Michael I. Pupin, Columbia University; *Coordination*, Scribner's Magazine, v. 76, no. 1, pp. 3–10 (1925).
2. December 1924, Washington, DC; Dr. Robert Henderson, Vice President, Equitable Life Assurance Society of the U.S.; *Life insurance as a social science and as a mathematical problem*, Bulletin of the American Mathematical Society, v. 31, nos. 5–6, pp. 227–252 (1925).
3. December 1925, Kansas City, Missouri; Professor James Pierpont, Yale University; *Some modern views of space*, Bulletin of the American Mathematical Society, v. 32, no. 3, pp. 225–258 (1926).
4. December 1926, Philadelphia, Pennsylvania; Professor H. B. Williams, Columbia University; *Mathematics and the biological sciences*, Bulletin of the American Mathematical Society, v. 33, no. 3, pp. 273–293 (1927).
5. December 1927, Nashville, Tennessee; Professor E. W. Brown, Yale University; *Resonance in the solar system*, Bulletin of the American Mathematical Society, v. 34, no. 3, pp. 265–289 (1928).
6. December 1928, New York, New York; Professor G. H. Hardy, Trinity College (England); *An introduction to the theory of numbers*, Bulletin of the American Mathematical Society, v. 35, no. 6, pp. 778–818 (1929).
7. December 1929, Des Moines, Iowa; Professor Irving Fisher, Yale University; *The applications of mathematics to the social sciences*, Bulletin of the American Mathematical Society, v. 36, no. 4, pp. 225–243 (1930).
8. December 1930, Cleveland, Ohio; Professor E. B. Wilson, Harvard School of Public Health; *Reminiscences of Gibbs by a student and colleague*, Bulletin of the American Mathematical Society, v. 37, no. 6, pp. 401–416 (1931).
9. December 1931, New Orleans, Louisiana; Professor P. W. Bridgman, Harvard University; *Statistical mechanics and the second law of thermodynamics*, Bulletin of the American Mathematical Society, v. 38, no. 4, pp. 225–245 (1932).
10. December 1932, Atlantic City, New Jersey; Professor R. C. Tolman, California Institute of Technology; *Thermodynamics and relativity*, Bulletin of the American Mathematical Society, v. 39, no. 2, pp. 49–74 (1933).
11. December 1934, Pittsburgh, Pennsylvania; Professor Albert Einstein, Institute for Advanced Study; *An elementary proof of the theorem concerning the equivalence of mass and energy*, Bulletin of the American Mathematical Society, v. 41, no. 4, pp. 223–230 (1935).
12. January 1935, St. Louis, Missouri; Dr. Vannevar Bush, Vice President, Massachusetts Institute of Technology; *Mechanical analysis*, Bulletin of the American Mathematical Society, v. 42, no. 10, pp. 649–670 (1936).
13. October 1936, New York, New York; Professor H. N. Russell, Princeton University; *Model stars*, Bulletin of the American Mathematical Society, v. 43, no. 2, pp. 49–77 (1937).
14. December 1937, Indianapolis, Indiana; Professor C. A. Kraus, Brown University; *The present status of the theory of electrolytes*, Bulletin of the American Mathematical Society, v. 44, no. 6, pp. 361–383 (1938).
15. December 1939, Columbus, Ohio; Professor Theodore von Kármán, California Institute of Technology; *The engineer grapples with nonlinear problems*, Bulletin of the American Mathematical Society, v. 46, no. 8, pp. 615–683 (1940).
16. September 1941, Chicago, Illinois; Professor Sewall Wright, University of Chicago; *Statistical genetics and evolution*, Bulletin of the American Mathematical Society, v. 48, no. 4, pp. 223–246 (1942).
17. November 1943, Chicago, Illinois; Professor Harry Bateman, California Institute of Technology; *The control of elastic fluids*, Bulletin of the American Mathematical Society, v. 51, no. 9, pp. 601–646 (1945).

18. November 1944, Chicago, Illinois; Professor John von Neumann, Institute for Advanced Study; *The ergodic theorem and statistical mechanics*.
19. November 1945, Chicago, Illinois; Professor J. C. Slater, Massachusetts Institute of Technology; *Physics and the wave equation*, Bulletin of the American Mathematical Society, v. 52, no. 5, part 1, pp. 392–400 (1946).
20. November 1946, Swarthmore, Pennsylvania; Professor Subrahmanyan Chandrasekhar, University of Chicago; *The transfer of radiation in stellar atmosphere*, Bulletin of the American Mathematical Society, v. 53, no. 7, pp. 641–711 (1947).
21. December 1947, Athens, Georgia; Professor P. M. Morse, Massachusetts Institute of Technology; *Mathematical problems in operations research*, Bulletin of the American Mathematical Society, v. 54, no. 7, pp. 602–621 (1948).
22. December 1948, Columbus, Ohio; Professor Hermann Weyl, Institute for Advanced Study; *Ramifications, old and new, of the eigenvalue problem*, Bulletin of the American Mathematical Society, v. 56, no. 2, pp. 115–139 (1950).
23. December 1949, New York, New York; Professor Norbert Wiener, Massachusetts Institute of Technology; *Problems of sensory prosthesis*, Bulletin of the American Mathematical Society, v. 57, no. 1, pp. 27–35 (1951).
24. December 1950, Gainesville, Florida; Professor G. E. Uhlenbeck, University of Michigan; *Some basic problems of statistical mechanics*.
25. December 1951, Providence, Rhode Island; Professor Kurt Gödel, Institute for Advanced Study; *Some basic theorems on the foundations of mathematics and their philosophical implications*. First published in his *Collected Works*, v. III, Oxford University Press, pp. 304–323 (1995). Published title omits the word “philosophical”.
26. December 1952, St. Louis, Missouri; Professor Marston Morse, Institute for Advanced Study; *Topology and geometrical analysis*.
27. December 1953, Baltimore, Maryland; Professor Wassily Leontief, Harvard University; *Mathematics in economics*, Bulletin of the American Mathematical Society, v. 60, no. 3, pp. 215–233 (1954).
28. December 1954, Pittsburgh, Pennsylvania; Professor Kurt O. Friedrichs, Institute of Mathematical Sciences, New York University; *Asymptotic phenomena in mathematical physics*, Bulletin of the American Mathematical Society, v. 61, no. 6, pp. 485–504 (1955).
29. December 1955, Houston, Texas; Professor Joseph E. Meyer, University of Chicago; *The structure of simple fields*, Bulletin of the American Mathematical Society, v. 62, no. 4, pp. 332–346 (1956).
30. December 1956, Rochester, New York; Professor Marshall H. Stone, University of Chicago; *Mathematics and the future of science*, Bulletin of the American Mathematical Society, v. 63, no. 2, pp. 61–76 (1957).
31. January 1958, Cincinnati, Ohio; Professor H. J. Muller, Department of Zoology, Indiana University; *Evolution by mutation*, Bulletin of the American Mathematical Society, v. 64, no. 4, pp. 137–160 (1958).
32. January 1959, Philadelphia, Pennsylvania; Professor J. M. Burgers, University of Maryland; *On the emergence of patterns of order*, Bulletin of the American Mathematical Society, v. 69, no. 1, pp. 1–25 (1963).
33. January 1960, Chicago, Illinois; Professor Julian Schwinger, Harvard University; *Quantum field theory*.
34. January 1961, Washington, DC; Professor J. J. Stoker, Institute of Mathematical Sciences, New York University; *Some nonlinear problems in elasticity*, Bulletin of the American Mathematical Society, v. 68, no. 4, pp. 239–278 (1962). Published under the title *Some observations on continuum mechanics with emphasis on elasticity*.
35. January 1962, Cincinnati, Ohio; Professor C. N. Yang, Institute for Advanced Study; *Symmetry principles in modern physics*.
36. January 1963, Berkeley, California; Professor Claude E. Shannon, Massachusetts Institute of Technology; *Information theory*.
37. January 1964, Miami, Florida; Professor Lars Onsager, Yale University; *Mathematical problems of cooperative phenomena*.

38. January 1965, Denver, Colorado; Professor D. H. Lehmer, University of California, Berkeley; *Mechanical mathematics*, Bulletin of the American Mathematical Society, v. 72, no. 5, pp. 739–750 (1966).
39. January 1966, Chicago, Illinois; Professor Martin Schwarzschild, Princeton University; *Stellar evolution*.
40. January 1967, Houston, Texas; Professor Mark Kac, Rockefeller University; *Some mathematical problems in the theory of phase transitions*.
41. January 1968, San Francisco, California; Professor Eugene P. Wigner, Princeton University; *Problems of symmetry in old and new physics*, Bulletin of the American Mathematical Society, v. 74, no. 5, pp. 793–815 (1968).
42. January 1969, New Orleans, Louisiana; Professor Raymond L. Wilder, University of Michigan; *Trends and social implications of research*, Bulletin of the American Mathematical Society, v. 75, no. 5, pp. 891–906 (1969).
43. January 1970, San Antonio, Texas; Professor Walter H. Munk, Institute of Geophysics and Planetary Physics and the Scripps Institution of Oceanography, University of California, San Diego; *Tides and time*.
44. January 1971, Atlantic City, New Jersey; Professor Eberhard F. F. Hopf, Indiana University; *Ergodic theory and the geodesic flow on surfaces of constant negative curvature*, Bulletin of the American Mathematical Society, v. 77, no. 6, pp. 863–877 (1971).
45. January 1972, Las Vegas, Nevada; Professor Freeman J. Dyson, Institute for Advanced Study; *Missed opportunities*, Bulletin of the American Mathematical Society, v. 78, no. 5, pp. 635–652 (1972).
46. January 1973, Dallas, Texas; Professor Jürgen Moser, Courant Institute of Mathematical Sciences, New York University; *The stability concept in dynamical systems*.
47. January 1974, San Francisco, California; Professor Paul A. Samuelson, Massachusetts Institute of Technology, *Economics and mathematical analysis*.
48. January 1975, Washington, DC; Professor Fritz John, Courant Institute of Mathematical Sciences, New York University; *A priori estimates, geometric effects, and asymptotic behavior*, Bulletin of the American Mathematical Society, v. 81, no. 6, pp. 1013–1023 (1975).
49. January 1976, San Antonio, Texas; Professor Arthur S. Wightman, Princeton University; *Nonlinear functional analysis and some of its applications in quantum field theory*.
50. January 1977, St. Louis, Missouri; Professor Joseph B. Keller, Courant Institute of Mathematical Sciences, New York University; *Rays, waves, and asymptotics*, Bulletin of the American Mathematical Society, v. 84, no. 5, pp. 727–750 (1978).
